

# Multi-robot real-time cooperative localization based on high-speed feature detection and two-stage filtering

Zeyu Zhou, Wei Tang, Zenghui Wang, Lijian Wang, and Renyuan Zhang

Automation, Northwestern Polytechnical University, China

- a high-speed feature detection and transformation method based on visual information is proposed.
- a multi-robot cooperative localization method based on two-stage EKF is established for dynamic real scene.
- a lightweight multi-robot information intersection mechanism is utilized to deploy the system in actual platform.
