

A Hierarchical Semantic Map for Large-scale Outdoor Environment

Di Zhang and De Xu

Research Center of Precision Sensing and Control, Institute of Automation,
Chinese Academy of Sciences, Beijing

- Make full use of the pre-known knowledge of environment.
- Use HOG features of landmarks to store semantic information.
- Use ORB feature points and their 3D position to form the local metric map.
- Build topological map, simple global metric map, semantic map, and local metric map.
